

## FOR IMMEDIATE RELEASE

### **R&D Molders, INC. polycarbonate blow molding solution procures enhanced medical bottle for global biotech company.**

*Mission critical dimensions and tolerances met by R&D Molders, INC in less than 7days .....*

Austin, TX, January, 2008- Today, R&D Molders, INC. announces it procures a mission critical polycarbonate medical bottle solution in less than 7 days. “We had been to numerous blow molding operations in the United States and Germany that were unable to adhere to our strict dimensions and tolerances for our product before we found R&D Molders. R&D worked diligently around the clock to provide us *perfect* working samples in just under a week.” *Quoted the client.*

“We undertake all of our projects with the same high energy and tenacity as this one, but this medical bottle product not only lessens the pain a patient incurs, it also significantly reduces their stay in the hospital. A project like this is personally satisfying since our solution is directly responsible for improving the quality of life for a wide range of hospital patients, but I can’t take all the credit myself.” *Continues Greg Brown II, Chief Business Development Officer.* “I could not make this happen without my tremendous team of blow molding specialists and our state of the art Bekum equipment. We pride ourselves on accomplishing details in the molding industry that others say cannot be done.”

The emphasis of meeting mission critical dimensions and tolerances for this polycarbonate medical bottle are mainly due in part to its end use. The bottle is used in many applications to drain the chest and abdomen cavity from fluids in patients and is a key product for this international biotech company. R&D Molders quest for perfection and an expeditious turn time was able to provide yet another cutting edge solution in the blow molding arena.
